(Cell Metabolism 24, 63–74; July 12, 2016)

In the original published article, a number of typographical errors were left uncorrected due to a printer error. These errors have since been fixed online. They are as follows:

The Graphical Abstract has been replaced to correct two typographical errors: LB was changed to LBP, and TNF- was changed to TNF- α .

In Table 1, fasting glucose and 2 hr OGTT glucose levels were given as mmol/l; these are now given as mM.

The Figure 2A legend described this panel as “(Fasting) liver EGP”; EGP has now been defined in the panel legend as endogenous glucose production.

A number of changes were made to Table 2. The variable TAG was initially given in mM; this has been corrected to μ M. The variable FFA was given as “ μ m”; this has been corrected to μ M. Values in the table for TAG (μ M), FFA (μ M), and Insulin (mU/l), pre and post, have now been rounded up or down as needed, owing to the change in units.

In the Figure 4 legend, several typographical errors, “BAs” and “Bas,” were corrected to BA.

In the Experimental Procedures section on Study Participants, the level of fasting glucose in subjects was corrected from 6.1 mmol/l to 5.6 mmol/l (as stated earlier in the manuscript under Subject Characteristics).

Additionally, misplaced commas were fixed in the Acknowledgments.

The journal regrets these errors and apologizes for any inconvenience.
